

Instructions:

Based on the following wireframes and the data.js provided, please implement the UI using any front-end framework that you feel comfortable with or have experience working with. You will be given **two hours** to submit your solution.

Here is the list of requirements that need to be implemented:

- 1) On the first page load only 8 products will be rendered.
- 2) The layout must be responsive which means:
 - a) At 640px or lower, you will display two products per row.
 - b) At 1024px or higher you will display two rows with four products on each row.
 - c) Between 640px and 1024px, you will display three products per row.
- 3) You need to implement the “Show More” functionality. When the user clicks on show more, you will render the next set of 8 products. Once, all products available in the data.js have been rendered, the “Show More” button should not be displayed.
